

Spirituality within Design and Technology

Spirituality within Design & Technology at Cop Lane C.E. Primary School

Spirituality in Design and Technology explores the interconnectedness of creativity, purpose and meaning in the design process. At Cop Lane C.E. Primary school, we encourage students to consider the deeper implications of their designs, enjoy the ethical, cultural and environmental impacts whilst also fostering a sense of wonder, compassion and care for others. Design and Technology aims to nurture children's awareness of how their creations can contribute to the wellbeing of one another, our school community as well as the wider world. Through meaningful projects, our pupils sense of awe and wonder is fostered, allowing for opportunities of self-reflection as well as their freedom to express and explore their own creations. Examples of this are:

- An exercise book that is taken throughout the years to show their journey throughout design.
- Children are given many different designers to explore the work of, allowing them to see vision and foster inspiration for their own ideas.
- Children are given the opportunities to design, create, make mistakes and grow through the design process, overcoming hurdles and building upon their learning to feel a sense of accomplishment.
- The opportunity to take part in events alongside other schools to promote curiosity throughout design and technology and use their skills in different contexts.
- Using a 3D printer to really see their work come to life!
